- Rename Files activated
- Move Files activated
- Save Tags activated

Tags

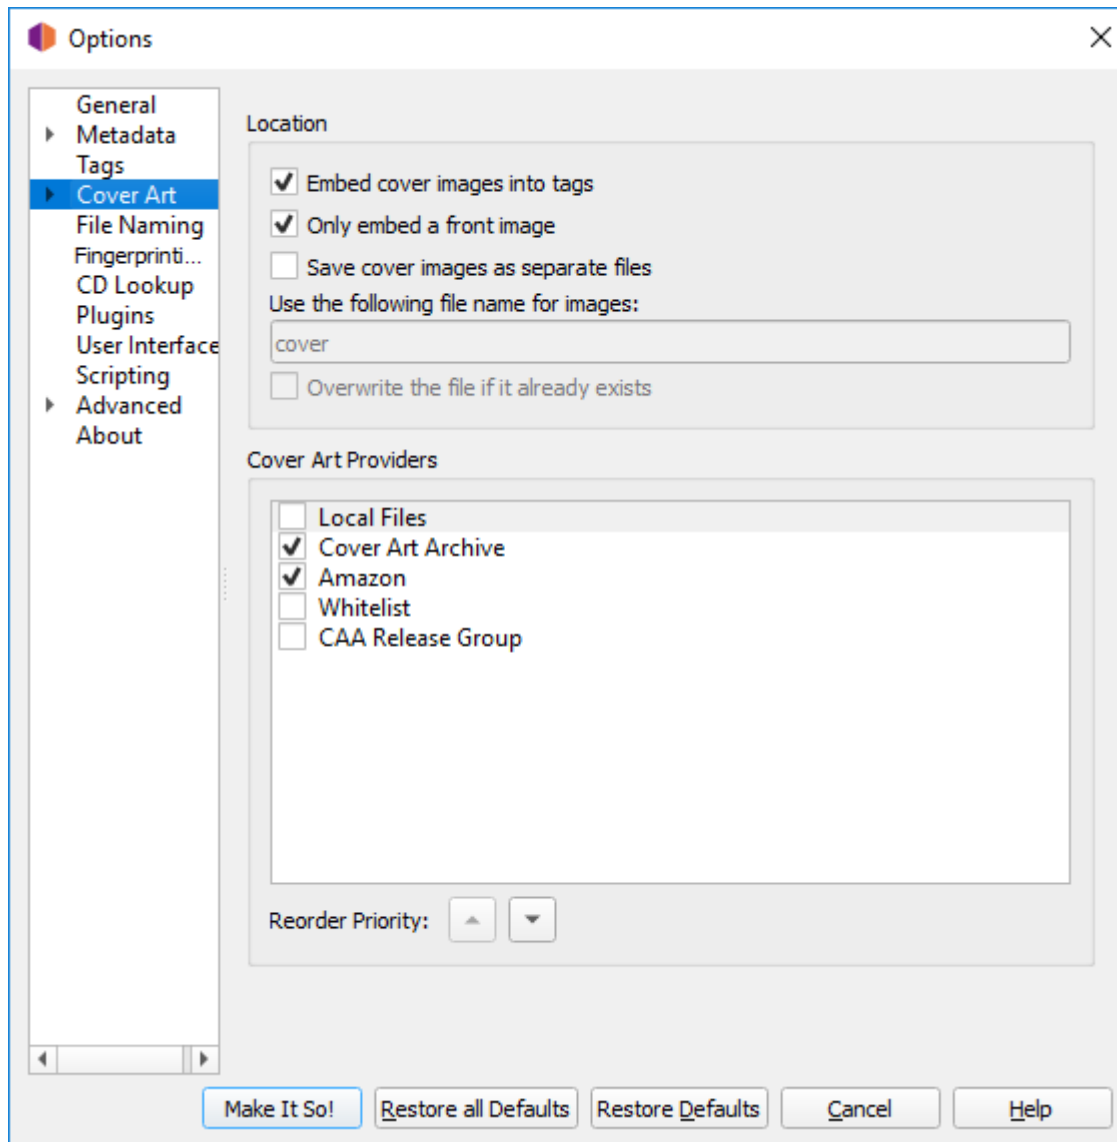

The screenshot shows the 'Options' dialog box with the 'Tags' tab selected. The left sidebar contains a list of categories: General, Metadata, Tags (selected), Cover Art, File Naming, Fingerprinting, CD Lookup, Plugins, User Interface, Scripting, Advanced, and About. The main area is divided into several sections:

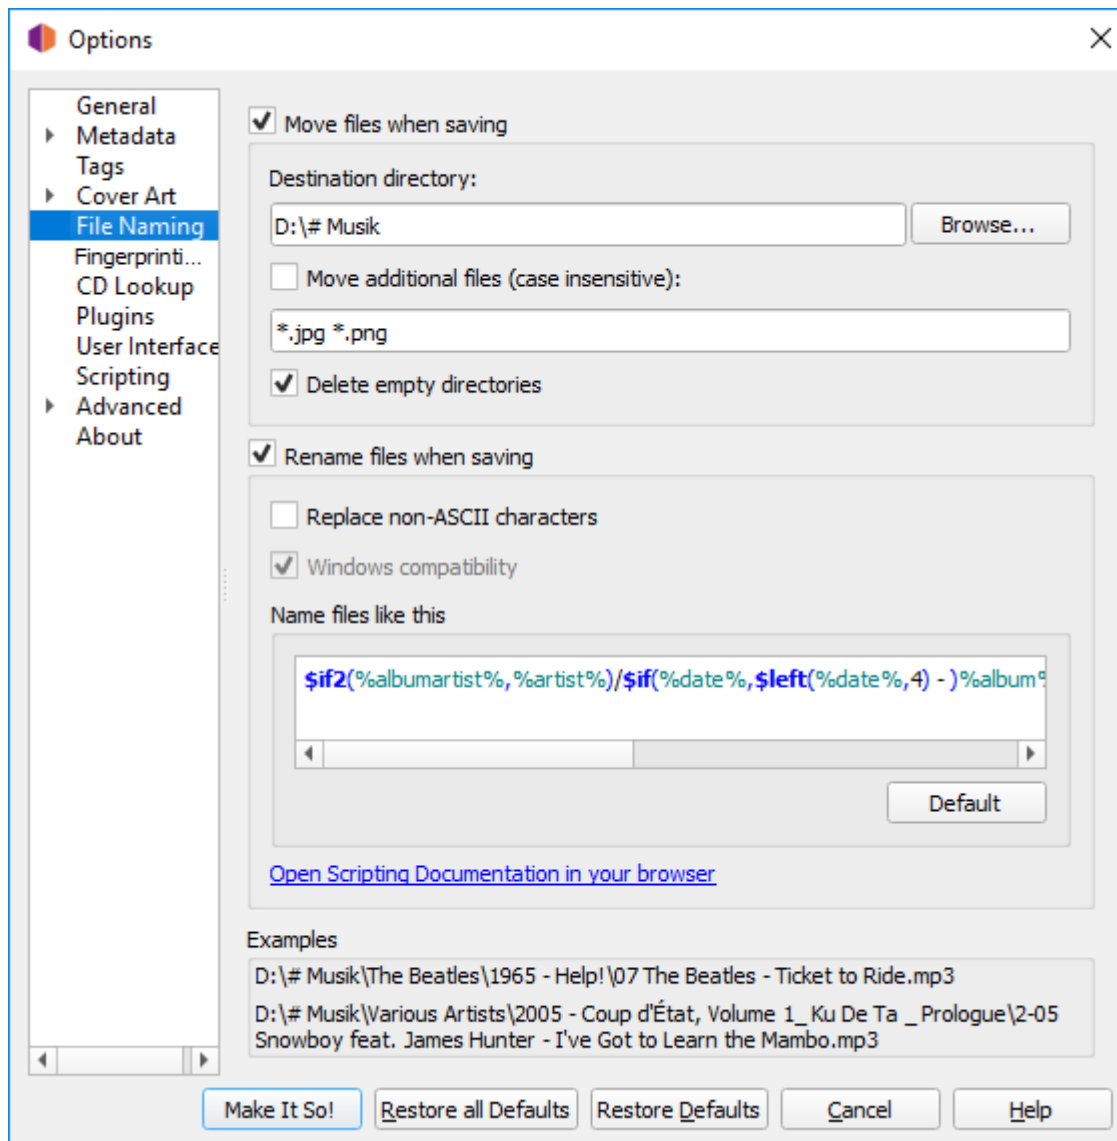

- Write tags to files:** A checked checkbox.
- Preserve timestamps of tagged files:** An unchecked checkbox.
- Before Tagging:** A section containing three checked checkboxes: 'Clear existing tags', 'Remove ID3 tags from FLAC files', and 'Remove APEv2 tags from MP3 files'. Below these is a text input field for 'Preserve these tags from being cleared or overwritten with MusicBrainz data:' and a note: 'Tags are separated by commas, and are case-sensitive.'
- Tag Compatibility:** A section containing:
 - ID3v2 Version:** Radio buttons for '2.4' and '2.3' (selected).
 - ID3v2 Text Encoding:** Radio buttons for 'UTF-8', 'UTF-16' (selected), and 'ISO-8859-1'.
 - Join multiple ID3v2.3 tags with:** A dropdown menu showing a semicolon (;).
 - Also include ID3v1 tags in the files:** An unchecked checkbox.

At the bottom of the dialog are five buttons: 'Make It So!', 'Restore all Defaults', 'Restore Defaults', 'Cancel', and 'Help'.

Cover Art

File Naming

```
$if2(%albumartist%,%artist%)/$if(%date%,$left(%date%,4) - )%album%/$if($gt(%totaldiscs%,1),%discnumber%-,)$num(%tracknumber%,2)%artist% - %title%
```
